JS Error Test	plugins error	NEED TO UPADATE TO LATEST
Social Media Test	Congratulations! Your website is connected successfully with social media using: Facebook Twitter	Good
HTML Page Size Test	he size of your webpage's HTML is 20.78 Kb and is under the average webpage's HTML size of 33 Kb. Faster loading websites result in a better user experience, higher conversion rates, and generally better search engine rankings.	Good
HTML Compression/GZIP Test	Your webpage is successfully compressed using gzip compression on your code. Your HTML is compressed from 104.14 Kb to 20.78 Kb (80% size savings). This helps ensure a faster loading webpage and improved user experience.	Good
Site Loading Speed Test	Your website loading time is around 4.82 seconds and this is under the average loading speed which is 5 seconds.	Good
Page Objects Test	Your page uses more than 20 http requests, which can slow down page loading and negatively impact user experience.	Need to improve
Page Cache Test (Server Side Caching)	Congratulations, you have a caching mechanism on your website. Caching helps speed page loading times as well as reduces server load.	Good
Flash Test	Congratulations! Your website does not include flash objects (an outdated technology that was sometimes used to deliver rich multimedia content). Flash content does not work well on mobile devices, and is difficult for crawlers to interpret.	Good
CDN Usage Test	Your webpage is not serving all resources (images, javascript and css) from CDNs.	Good
Image Caching Test	Your website is not using cache headers for your images. Setting cache headers can help speed up the serving of your webpages for users that regularly visit your site and see the same images. Learn more about how to add expires headers to your images.	Need to improve
JavaScript Caching Test	Your website is not using cache headers for your JavaScript resources. Setting cache headers can help speed up the serving of your	Need to improve
CSS Caching Test	Your website is not using cache headers for your CSS resources. Setting cache headers can help speed up the serving of your webpe	Need to improve
JavaScript Minification Test	Congratulations! Your website's JavaScript files are minified!	Good
CSS Minification Test	Congratulations! Your webpage's CSS resources are minified.	Good
Nested Tables Test	Congratulations, your page does not use nested tables. This speeds up page loading time and optimizes the user experience.	Good
Frameset Test	Congratulations! Your webpage does not use frames.	Good
Doctype Test	Congratulations! Your website has a doctype declaration:	Good
URL Redirects Test	Congratulations! Your URL doesn't have any redirects (which could potentially cause site indexation issues and site loading delays).	Good
URL Canonicalization Test	https://www.aplusonlinetutoring.com and https://aplusonlinetutoring.com resolve to the same URL.	Good
HTTPS Test	Your website is successfully using HTTPS, a secure communication protocol over the Internet. SECURITY STATE, secure, CERTIFICATE ISSUER, Sectigo RSA Domain Validation Secure Server CA, VALID UNTIL, Jul 28, 2022	Good
Safe Browsing Test	This site is not currently listed as suspicious (no malware or phishing activity found).	Good
Server Signature Test	Your server signature is on. Turning off your server signature is generally a good idea from a security standpoint. Read more on how to turn off server signature and improve your website's security.	Need to improve

Plaintext Emails Test	We've found 1 email addresses in your page code. We advise you to protect email links in a way that hides them from the spam harvesters.	Need to improve
Media Query Responsive Test	Congratulations, your website uses media query technique, which is the base for responsive design functionalities.	
Structured Data Test	Your webpage doesn't take the advantages of HTML Microdata specifications in order to markup structured data. View Google's guide for getting started with microdata.	Need to improve
Custom 404 Error Page Test	Your website is not using a custom 404 error page. Default 404 error pages result in a poor experience - it can mislead users into thinking an entire site is down or broken, greatly increases the chance they leave your site entirely, and looks unprofessional. By creating a custom 404 error page, you can improve your website's user experience by letting users know that only a specific page is missing/broken (and not your entire site), providing them helpful links, the opportunity to report bugs, and potentially track the source of broken links in your site.	Need to improve
Noindex Tag Test	Your webpage does not use the noindex meta tag. This means that your webpage will be read and indexed by search engines.	Good
Canonical Tag Test	Your webpage is using the canonical link tag. This tag specifies that the URL: https://www.aplusonlinetutoring.com is preferred to be used in search results. Please ensure that this specification is correct, as canonical tags are often hard-coded and may not always reflect the latest changes in a site's URL structure.	Good
Nofollow Tag Test	Your webpage does not use the nofollow meta tag. This means that search engines will crawl all links from your webpage.	Good
Disallow Directive Test	Your robots.txt file disallow the search engines access to some parts of your website. You are advised to check carefully if the access to these resources or pages must be blocked.	
SPF Records Test	Congratulations! Your DNS server is using an SPF record.	Good
Text To HTML RATIO	The Text to HTML ratio is 11.98%	It Should be Around 20%
Frames	No frames detected.	
Flash	No flash detected.	
Mobile Optimization	Mobile PageSpeed analyzes webpages and evaluates its performance while providing suggestions on reducing page load times. Google is incorporating website speed in search ranking
